2024 Leads Source Report

Summary & Insights

Here is a concise summary of your Leads Monitor data: You have a substantial lead base of 811 individuals, with 321 of them actively engaged, indicating a 39.6% activation rate. This suggests that nearly 40% of your leads are currently interacting with your organization, which is a promising sign of user engagement. Furthermore, the total contributions of 348,968 demonstrate a high level of community participation and technical output, implying that your organization is generating significant value and driving meaningful progress. However, the repository metrics reveal a different story, with 90 total repositories but none of them being active or deployed. This indicates that while there is a wealth of technical output, it is not being translated into real-world impact through deployed solutions. To increase the activation rate, consider targeted outreach and nurturing campaigns to encourage more leads to become active participants. Additionally, focus on streamlining the development process to move more repositories from creation to deployment, thereby amplifying the practical effects of your organization's contributions. By addressing these areas, you can unlock even more value from your lead base and technical output.
