Introduction

PRDT.finance is a decentralized, cross-chain prediction market platform that empowers users to profit from forecasting crypto and forex markets.

PRDT introduces an innovative profit-sharing and governance token designed to:

01 PHASE | Reward early adopters through pre-mining

02 PHASE | Share platform profits (ETH, BNB, USDT, USDC...) via staking PRDT

Stabilize value of PRDT through adaptive buyback-and-burns

03 PHASE | Empower community-led growth via decentralized governance

Ways to Earn:

- Mine PRDT during the pre-launch phase
- Boost your mining rate by trading on PRDT
- Refer active traders for bonuses
- Stake PRDT post-launch for daily rewards dividend

Core Innovations:

- **Hybrid System:** Combine staking and governance
- **Dynamic Tokenomics:** Adaptive buyback-and-burns based on market conditions
- **Progressive Decentralization:** From team-led to community-controlled

Pre-launch Mining Phase (1 - 6 Months)

Mining Mechanics

Method	Reward	Requirements
Passive Mining	0.1 PRDT/day	Wallet connection
Daily Check-In	1 PRDT/day (+10x)	One-click confirmation
Volume Boost	Up to 150x	Tiered 30-day trading volume
Referral Program	+0.1PRDT/ +0.5PRDT day	Per active referred trader without volume boost

Trading Volume in USD Tiers (measured from past 30 days):

Tier	Trading Volume (USD)	Mining Multiplier
1	\$0 – \$100	1x
2	\$100 – \$500	1.5x
3	\$500 – \$1,000	2.25x
4	\$1,000 – \$5,000	3.5x
5	\$5,000 – \$10,000	13.5x
6	\$10,000 – \$50,000	30x
7	\$50,000 and above	150x

Key Rules:

Volume boost tiers multiply your mining rate (eg. Tier 7 and daily check in totals 150 PRDT per day)

25% of total supply allocated to mining

No purchase necessary to participate in pre-mining

Per tokens at the end of pre-mining roll into the staking pool post-launch, ensuring continued community rewards.

Token Utility & Economics

A. Post-Launch Profit Sharing

Pool	Allocation	Mechanism
Staking Rewards	80 %	Algorithm determines daily drip
Buyback Reserve	20 %	Activates when price drops > 20% below 30-day MA

Dividend Example:

Daily profits: \$100,000 → \$80,000 to stakers and \$20,000 to PRDT buyback reserve

B. Tokenomics (Total Supply: 100M PRDT)

Allocation	%	Vesting	Release Schedule
Mining and Rewards (Including pre and post token launch mining)	25 %	TGE (Token Generation Event) Unlock	Immediate
Development	25 %	12-mo Linear	8.33% monthly
Marketing	20 %	12-mo Linear	8.33% monthly
Liquidity (For exchange liquidity and cross chain liquidity)	15 %	Locked	DEX listing
Team	15 %	12-mo Linear	8.33% monthly

Governance Framework

(Phase 3 Launch)

Governance Powers

Voting System

Proposal Type	Submission Threshold	Voting Period	Quorum
Protocol Changes	5M PRDT staked	7 days	30 %
Feature Updates	1M PRDT staked	3 days	15 %

Innovative Features:

- 01 Gasless Voting:** Stakers auto-enrolled via Snapshot
- 02 Participation Rewards:** additional APR bonus for voters
- 03 Emergency Veto:** Team can halt malicious proposals (this power sunsets after 24 months, after which governance is fully community-controlled)

Roadmap

Key Milestones:

Security & Transparency

Protocol Safeguards:

- Time-locked smart contracts for:
 - Team token releases
 - Governance upgrades
- Real-time dashboards for:
 - Profit distributions
 - Burn transactions

Fund Protection:

- Development treasury
- Timelock on allocations with vesting schedule
- Buyback reserves

Community Security:

- Open bug bounty campaign to incentivize community audits.

FAQ

Q: How are dividends taxed?

A: Consult local regulations – PRDT distributes in original profit currencies (e.g., ETH, USDC, USDT).

Q: Can exchanges participate in governance?

A: Only self-custodied tokens count. Exchange- held tokens are excluded from voting.

Q: What prevents whale dominance?

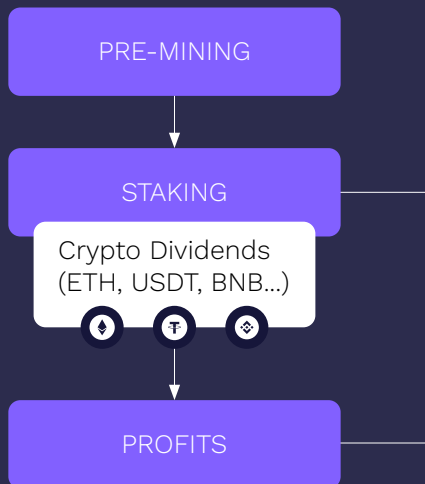

A: Quadratic voting considered for future upgrades (1M PRDT max voting weight).

Q: What mechanisms help maintain PRDT token price stability?

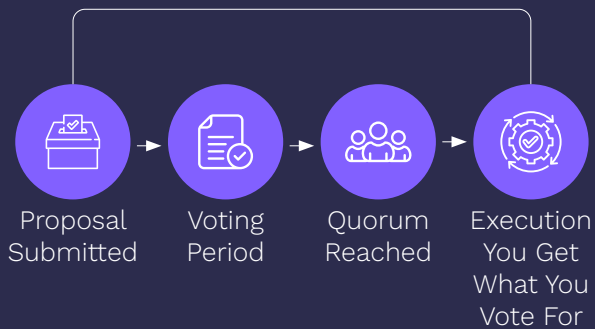

A: PRDT uses an adaptive buyback-and-burn mechanism. When the price drops 20% below its 30-day moving average, a portion of platform profits is used to buy back and burn tokens, reducing supply and supporting the price. Additionally, staking rewards in crypto and real trading activity create ongoing demand for the token.
